

## **PVC Downspout Adapter**

Our PVC Downspout Adapters are engineered and designed to properly connect stormwater gutter downspouts to non-pressurized drainage pipes, directing water safely away from a building's foundation and landscaping. The most common downspout adapters connect the square or rectangular gutter downspout to drainage pipes such as Advanced Drainage Solutions (ADS), Iron Pipe Size (SCH40/IPS), and 3034 Sewer (SDR35) pipe.

The first two numbers in a part's description indicates the downspout size, while the final number represents the size of the drainage pipe. A description marked 'Male' indicates the adapter fits inside a PVC fitting or HDPE pipe, while 'Hub' indicates it fits over the pipe.

Many sizes are available in both concentric and offset styles. Custom sizes are available. Please call for pricing and availability on any custom size not listed.
