

Airline filters remove particulates from compressed air before delivery to a supplied-air respirator. The Barricade 286 Airline Filter removes moisture, oil, odor, particulates, and organic vapors from compressed air and can be used as a component of a supplied-air respiratory system as required in OSHA regulation 29CFR 1910.134. Commonly used with supplied-air respirators for use in abrasive blasting, general cleaning, inspections, and painting and coating applications.

ADVANCED FILTRATION

The Barricade 286 Airline Filter includes a seven-stage filtration process that catches and removes moisture, odors, organic vapors, and other particles from the air supply. This filtration process provides cleaner breathing air or source air.

APPLICATION VERSATILITY

The Barricade 286 Airline Filters are capable of supplying up to six outlets with conditioned breathing air with a single filter. The Barricade 286 Airline Filters can also be used to condition compressed air used to power pneumatic tools.

ENHANCED SAFETY

A rugged, stable ring base with three stout legs, minimizes the chance of tipping associated with standard three legged bases. Three bolt holes enable you to securely mount the Barricade 286 Airline Filter to a surface.

A rugged, stable base with three stout legs, minimizes tipping associated with standard three legged bases. Three bolt holes enable you to securely mount the Barricade 286 Airline Filter to a surface.

The offset position of the petcock provides easy access for draining collected moisture.

Configurations are available with 1, 2, or 6-outlets for connecting to multiple supplied-air respirators or pneumatic power tools.

A seven-stage filtration process provides cleaner breathing air or source air by catching and removing moisture, odors, organic vapors, and other particles from the air supply.

KEY FEATURES:

- 1, 2, or 6-outlet configurations
- Filters up to 100 cfm @ 100 psi
- Anti-tip ring base
- Bolt holes in ring base for secure mounting
- Offset petcock placement

Air Hose Fittings & Ball Valves

Air hose fittings are available in 2 Lug, 4 Lug and Hammer Lock styles. Ball Valves are available in 1/4" I.D. to 4" I.D.

Air Hose

Air hose conveys compressed air to your blast pot and pneumatic tools.

Blast Suits

Blast Suits provide personal protection during the blast process.

Barricade Carbon Monoxide Monitor

The Barricade Carbon Monoxide Monitor continuously samples the breathing air supplied to a respirator for the presence of carbon monoxide.
